

FN-2127-NY-R / FN-4127-NY-R ANALOG ADDRESSABLE FIRE ALARM CONTROL PANEL

DESCRIPTION

This alternate build of the FireNET™ 4127 control panel is equipped with a plexiglass window to meet the requirements of major cities. Access level 2 is enabled as soon as the outer door of the enclosure is opened (FDNY 2642 Key).

The FireNET™ 4127 control panel is an analog addressable fire alarm panel containing 2 or 4 SLC loops with each loop supporting 127 devices of any combination (sensors or modules), and 127 analog sounder bases, for a possible total of 254 points. Communication between devices is transferred through standard cable (shielded or twisted pair is not required). Each panel includes a 5.25 amp power supply and has 4 on board NAC circuits. An RS-485 bus provides communication to the panel network, while the RS-232 interface allows the convenience of programming via a PC. The system will support a variety of Hochiki devices: photo, ion and heat sensors, which contain a unique, patented sensor design incorporating automatic drift compensation and day/night sensitivity mode. Additional devices include contact monitors, relay controllers, supervised auxiliary output and short circuit isolator modules. In addition. interfaces to conventional detection systems can be established by using a conventional zone-monitoring module. The Loop Explorer Windows® Software interface provides the installer with fingertip access to installation programming and diagnostic tools. Fast system startup is ensured by means of the built-in autolearn feature. And with Hochiki's reputation for high quality and outstanding service and support, you can be sure that the FireNET system is an exceptional product both in performance and value.
